AMENDMENTS TO THE CLAIMS

Please amend the Claims as follows. Insertions are shown underlined while deletions are ~~struck through~~.

1 (currently amended): An image data processing system comprising:
an image inputting section for inputting image data;
an image processing section that performs image processing on the input image data to create image data for printing;
a first controlling section that performs controls over said image inputting section and said image processing section; and
an image transmitting section capable of simultaneously transmitting said image data for printing to a print preparing device and to an image storing device, ~~characterized in that~~wherein said image storing device ~~(B)~~ includes:
an image receiving section ~~(20)~~ that receives said image data for printing that are transmitted from said image transmitting section ~~(8)~~;
a storing medium ~~(22)~~ for storing the received image data; and
a second controlling section ~~(24)~~ that performs controls over said image receiving section ~~(20)~~ and said storing medium ~~(22)~~.

2 (currently amended): The image data processing system of claim 1, ~~characterized in that~~wherein said system further includes an external recording section ~~(23)~~ for recording said received image data into an external recording medium, and ~~that~~ said external recording section ~~(23)~~ ~~also~~ is controlled by said second controlling section ~~(24)~~.

3 (currently amended): The image data processing system of claim 1, ~~characterized in that~~wherein said system further includes conversion processing sections ~~(3a, 20b)~~ that perform a conversion process on said received image data, and is constructed so that the image data subjected to the conversion process are stored into said storing medium ~~(22)~~ and/or said external recording medium.

4 (currently amended): The image data processing system of claim 1, ~~characterized in that~~wherein said system further includes:

Appl. No. : Unknown
Filed : Herewith

a first conversion processing section ~~(3a)~~ that performs a conversion process on the image data for printing that are constructed in said image processing section ~~(3)~~;

a second conversion processing section ~~(20a)~~ that performs a conversion process on the image data for printing that are constructed in said image receiving section ~~(20)~~; and

conversion process selecting means ~~(7a)~~ for selecting either one of said first conversion processing section ~~(3a)~~ and said second conversion processing section ~~(20a)~~.

5 (original): The image data processing system of claim 3, wherein said conversion process includes a process for enlarging or diminishing the size of the image data.

6 (currently amended): The image data processing system of claim 1, ~~characterized in that~~ wherein said system further includes process mode selecting means ~~(7b)~~ capable of selecting all of or any part of a mode for performing a process of preparing a picture print, a mode for performing a process of storing the image data into a hard disk ~~(22)~~, and a mode for performing a process of writing the image data into a CD-R.

7 (currently amended): The image data processing system of claim 6, ~~characterized in that~~ wherein said process mode selecting means ~~(7b)~~ is capable of selecting a mode for storing the image data into the image storing device ~~(B)~~ without performing a conversion process on the image data.
